

Data Cleaning Documentation and Change Log

Dataset: Campaign_Data_Week1

Tool Used: Microsoft Excel

Audit Result: Dataset verified cleanly; zero structural or logical errors identified.

Data Quality Audit Overview

A comprehensive data hygiene audit was performed on the raw Campaign Data file prior to analysis. The goal was to verify primary key uniqueness, field formatting, logical consistency, and category standardization.

Following a full inspection across all records, **no data anomalies, missing values, or logical errors were detected**. The raw dataset was determined to be production-ready for pivot table aggregation and executive reporting.

Data Verification Log

Audit ID	Data Field / Column	Quality Check Performed	Verification Result	Status
VAL-01	Interaction ID	Screened for duplicate records and blank primary keys using Excel Conditional Formatting and Remove Duplicates.	100% of rows contain a unique, non-null ID. Zero duplicates found.	PASSED
VAL-02	Sales (\$) vs Converted	Verified logical integrity between conversions and revenue (Converted = 0 MUST equal \$0.00; Converted = 1 MUST have Sales > 0).	Zero logical discrepancies found. Non-converted visits correctly display \$0.00.	PASSED
VAL-03	Time on Site	Inspected for negative values, non-numeric text, or missing session durations using data filtering.	All values are positive integers representing valid session lengths.	PASSED
VAL-04	Campaign Type and Channel	Checked for casing inconsistencies, typos, or trailing spaces using UNIQUE() list extractions.	Categories are perfectly standardized (e.g., "Sales-Focused", "Brand-Focused", "Email", "Instagram").	PASSED
VAL-05	Customer Type	Checked for unexpected categories outside "New" and "Existing".	Only two distinct values exist; no blank or corrupted records present.	PASSED

VAL-06	Converted	Audited values to ensure a strict binary flag (1 or 0).	Data contains strictly 1s and 0s; no text inputs ("Yes"/"No") or nulls found.	PASSED
---------------	-----------	---	---	---------------

Standardized Formatting Applied

While no data values were modified or removed, standard formatting was applied across the sheet to ensure clear readability:

- **Sales (\$):** Formatted as Currency (\$).
- **Converted:** Set to Numeric Integer for AVERAGE calculation compatibility.
