

Interactive Dashboard User Guide and Technical Documentation

Workbook Name: Campaign_Data_Week1.xlsx

Tab Name: Dashboard

Platform: Microsoft Excel

Target Audience: NewCo Executive Leadership, and Marketing Strategy Team

1. Executive Summary and Dashboard Intent

The **NewCo Ad Campaign Performance Console** is an interactive, single-page executive interface built in Excel. It translates raw multi-channel campaign data into real-time visual insights, enabling stakeholders to evaluate campaign spend efficiency, channel performance, and customer acquisition vs. retention dynamics without interacting directly with complex underlying data tables.

2. Interface Layout and Visual Architecture

The dashboard tab is designed in a streamlined grid layout, grouped into three primary visual zones:

3. Dynamic Components and Visual Specifications

Zone 1: KPI Scorecards

Located across the top horizontal band, these scorecards give leadership an instant pulse on high-level campaign health.

Card Name	Dynamic Metric	Calculation / Logic	Primary Business Insight

Total Sales (\$)	\$14,659.60	=SUM(Sales)	Total revenue generated across all channels.
Total Conversions	239	=SUM(Converted)	Aggregate volume of completed orders/conversions.
Baseline Conversion Rate	48%	=Total Conversions / Total Interactions	Overall campaign conversion efficiency (239 / 500).
New Customer Revenue	\$5,844.43	=SUMIFS(Sales, Customer Type, "New")	Measures top-of-funnel acquisition value (39.87% of total sales).

Zone 2: Visual Charts and Analytics

Chart 1: Channel Revenue Breakdown

- **Chart Type:** Vertical Bar Chart
- **Source Pivot:** Dedicated Pivot Table on Channel_Campaign_Pivot_Tables (Channel vs. Sum of Sales)
- **X-Axis:** Revenue in USD (\$)
- **Y-Axis:** Marketing Channel (Email, Instagram, Web Banner)
- **Core Insight Highlighted:** Clearly shows **Email** as the primary revenue generator (\$7,909.31), outperforming Instagram (\$3,873.41) and Web Banner (\$2,876.88) combined.

Chart 2: Conversion Volume Share

- **Chart Type:** Pie Chart
- **Source Pivot:** Dedicated Pivot Table on Channel_Campaign_Pivot_Tables (Channel vs. Sum of Converted)
- **Data Labels:** Percentage Contribution to Total Conversions
- **Core Insight Highlighted:** Illustrates conversion distribution across channels:
 - **Email (Campaign A):** 44% (41 conversions)
 - **Instagram (Campaign A):** 38% (35 conversions)
 - **Web Banner (Campaign A):** 18% (17 conversions)
 - **Email (Campaign B):** 44% (72 conversions)
 - **Instagram (Campaign B):** 38% (29 conversions)
 - **Web Banner (Campaign B):** 18% (45 conversions)

Zone 3: Interactive Slicer Control Center

To allow deep-dive exploratory analysis, three interactive Slicers sit at the bottom of the dashboard sheet:

1. **Customer Type Slicer:** Options: All, New, Existing
 - *Usage:* Toggling to New isolates Campaign A's acquisition dominance (\$3,726.99). Toggling to Existing highlights Campaign B's retention driver status (\$6,672.60).
2. **Campaign Type Slicer:** Options: All, Campaign A, Campaign B
 - *Usage:* Filters all scorecards and charts to evaluate individual campaign performance.
3. **Channel Slicer:** Options: All, Email, Instagram, Web Banner
 - *Usage:* Isolates performance metrics across specific communication channels.

4. Technical Architecture and Setup Instructions

To avoid chart corruption where modifying one chart alters subsequent visual elements, this dashboard utilizes a **De-coupled Multi-Pivot Engine**:

Technical Build Steps:

1. **Dedicated Summary Pivots:** Created independent, dedicated Pivot Tables on tab Channel_Campaign_Pivot_Tables for each distinct visual object.
2. **Slicer Connection Protocol:**
 - Right-click Slicer -> Select **Report Connections** Check all Pivot Tables across Channel_Campaign_Pivot_Tables.
 - *Result:* Clicking a single slicer button instantly the revenue bar chart, and the conversion pie chart simultaneously.
3. **KPI Card Linking:** Scorecard text boxes are linked directly to isolated formula helper cells (Channel_Campaign_Pivot_Tables!\$G\$4) rather than dynamic pivot boundaries, preventing text box reference errors when filters are applied.

4. **UI Refinement:** Disabled gridlines (View -> uncheck Gridlines), and standardized number formatting (\$#, ##0.00, and #0%).
