

EXCELERATE DATA ANALYSIS · FINAL PRESENTATION

Opportunity & Engagement Dashboard

From learner and opportunity data to a validated Looker Studio dashboard — Week 4 Final Presentation

PostgreSQL · Google Sheets · Google Looker Studio

What we set out to measure

This analysis examines learner applications and internship opportunities to understand participation, scholarship access, rewards, completion, and application patterns — giving Excelerate an evidence-based view of program engagement and outcomes.

1 Measure learner participation.

2 Evaluate scholarship access.

3 Analyze reward distribution.

4 Identify application trends over time.

5 Identify areas of improvement.

The program, in five numbers

Data cleaned in Week 2 — learner records, opportunities, applications, scholarships, and rewards — rolled up into the dashboard's headline scorecards.

Two source files

Learner Data — one row per learner application/interaction, with status, dates, and outcomes. · Opportunity Data — the catalogue of internships, careers, competitions, courses, events, masterclasses, engagements, and job simulations learners apply to.

From cleaned data to an interactive dashboard

1

Start from Week 2's cleaned data.

The dataset cleaned and validated in Week 2 was used as the foundation for this analysis — no re-cleaning needed.

2

Calculate key metrics in PostgreSQL.

Metrics for learners, opportunities, applications, scholarships, rewards, and completion were calculated and organized in PostgreSQL.

3

Publish to Google Sheets.

Processed results were exported to Google Sheets to serve as the Looker Studio connection layer.

4

Visualize in Looker Studio.

Scorecards, bar charts, and trend charts were built in Looker Studio to present findings as an interactive dashboard.

Data Validation: Before and After Joining and Cleaning

Number of Records

Number of Fields

The learner data had an initial number of 15029 records and the Opportunities data had a total of 5733 records. After joining both tables and cleaning, the total number of record was 14,799. Number of fields in the joined table was 42, while learner and opportunity data had 43 and 33 fields respectively.

Opportunity performance: sign-ups vs. completion

Sign-ups by category

Completion rate by category (%)

Internship attracted the most sign-ups; Program and Xploreu the fewest. Xploreu and Program show 50% completion — but that's 1 of 2 sign-ups each, not a meaningful sample.

Does opportunity duration affect completion?

Completed learners vs. duration (days)

One-month-duration opportunities had the highest completion counts, followed by two-month opportunities.

Shorter programs may be associated with better completion — worth testing when designing future opportunities.

Reasons for Withdrawals

Count of Reasons for Withdrawals

Specific Reasons for Withdrawals

	withdraw_reason	reason_count ▾
1.	Withdraw from opportunity by automation	152
2.	test	21
3.	Withdraw from opportunity	3
4.	Withdraw Application%0A	3
5.	Reason for withdrawal%0A	2
6.	done by arunava	1
7.	don%27t want to continue	1
8.	b nm	1
9.	checking updates	1
10.	I dont wanaa do this	1

1 - 10 / 26 < >

Out of 400 withdrawals only half had reasons, the rest were null. To improve the learners experience, better data collection needs to be done to know why they are withdrawing, since majority of the reasons were "automated" or a "test".

Application trends: short-term and 6-month view

Applications — last 7 dates

Applications — last 6 months

Applications declined through April 2026, with zero applications on April 18 and 19. Over six months, December had the most applicants and March the fewest.

Learner status over the last 6 months

A gap worth watching

Even though April had more applicants than March, April recorded the lowest number of Team Allocations. Also all learners were found to be eligible however close to half reasons for acceptance or rejection was missing

This points to a possible breakdown between applying and being allocated — a key thread to pull on. More work needs to be done to record the reasons for acceptance or rejection for a better qualitative analysis

Scholarship distribution and lead sources

Scholarships by category

Applications by lead source

Rewards by category

Internship leads scholarship value (26.5%) and rewards (240+). Social Media and Illinois Institute of Technology are the top two lead sources by volume.

Quarterly comparison: a clear engagement signal

Q4 2025 → Q1 2026

-31.53%

720 applications → 493 applications

The largest quarter-over-quarter decrease observed in this dataset

Why it matters

Learner applications were used to identify changes in engagement over time. This comparison helps surface seasonal patterns and shifts in learner participation — and it's the clearest early-warning signal in the whole dashboard.

This decline is consistent with the monthly trend (Slide 7): applications fell every month from December through March, before a slight rebound in April.

Dashboard View

Ten findings from the dashboard

- **Strong overall participation**

5,730 learners, 9,044 applications, 10 opportunities, 8,108 scholarships, 731 rewards

- **Completion rates vary by category**

Xploreu/Program's 50% reflects just 1 of 2 sign-ups, not real strength

- **Recent activity declined**

Zero applications recorded on April 18 and 19, 2026

- **A conversion gap in April**

More applicants than March, yet the fewest team allocations

- **Lead sources are trackable**

Social Media and Illinois Institute of Technology lead by volume

- **Internship attracts the most learners**

Program and Xploreu had the lowest sign-ups

- **Shorter opportunities complete more often**

One-month duration had the highest completion counts

- **Monthly trends fluctuated**

December was the peak month; March was the lowest

- **Quarterly decline of 31.53%**

720 (Q4 2025) → 493 applications (Q1 2026)

- **Scholarships & rewards span categories**

Enables category-by-category comparison of program support

Eight actions for Excelerate

Promote low-performing categories.

Targeted awareness campaigns for Program and Xploreu, which trail far behind Internship.

Re-engage learners in low-activity periods.

Campaigns or reminders around dates like April 18–19, when applications hit zero.

Favor manageable opportunity durations.

One-month opportunities complete best — consider this when designing new programs.

Read completion rates with sample size in mind.

Xploreu/Program's 50% is 1-of-2, not a proven trend — don't over-index on it.

Improve application-to-allocation conversion

Investigate why April's high applicant count didn't translate into team allocations.

Double down on top-performing lead sources

Identify which channels generate the most applications and focus marketing there.

Investigate the quarterly decline

Determine whether the 31.53% Q4→Q1 drop reflects seasonality, promotion, or availability.

Review the dashboard on a regular cadence

Monitor applications, completion, allocation, scholarships, rewards, and lead sources.

How the dashboard was built

Data was sorted and organized in PostgreSQL, then connected to Looker Studio, where scorecards, bar charts, and trend charts turn the processed data into simple, interactive visuals.

- **KPI scorecards** Learners, applications, scholarships, rewards, and opportunities at a glance.
- **Opportunity charts** Compare sign-ups and completion rates by category, with a slide filter on the Completion vs. Duration chart (durations span up to two years).
- **Application trend charts** Track change over time, with a dropdown filter on the Application Status chart to compare individual statuses over the last 6 months.
- **Lead source & scholarship charts** Understand where applicants come from and how support is distributed.
- **Quarterly comparison** Surfaces period-over-period shifts in applications at a glance.

CONCLUSION & NEXT STEPS

A clear view of participation — and a clear signal to act on

The dashboard makes learner participation, opportunity performance, applications, scholarships, and rewards easy to understand through visualization. The 31.53% decline in applications highlights the need for stronger learner engagement and targeted promotion — findings that can directly inform opportunity planning, outreach, and future participation.
